OUR SERVICES

DIGITAL SERVICES

01

Basic Website

A basic website is a simple online platform, typically consisting of a few pages, such as Home, About, and Contact, delivering essential information and functionalities for visitors and users.

02

Advance Website

An advanced website offers cutting-edge features, seamless user experience, responsive design, efficient navigation, interactive elements, personalized content, high security, and advanced analytics to enhance online presence and engagement.

03

Domain Registration & Management

Domain registration and management involve securing a web address and overseeing its settings, DNS, and renewals. Crucial for website accessibility and online branding. Pro Email is included.

04

Cloud Services

Cloud services are online computing resources accessible via the internet. They offer scalable storage, computing power, and applications, enabling businesses to streamline operations and improve flexibility and efficiency.

05

Hosting Powered by Google

Google Hosting: Reliable and scalable web hosting service by Google Cloud. Offers high-performance servers, global network, and secure infrastructure for seamless website deployment and management.

06

WordPress Maintenance

WordPress maintenance ensures your site runs smoothly. Regular updates, backups, security checks, and optimization keep it secure, fast, and error-free. Vital for online success.

07

Email Marketing/Automations

Email automations streamline communication, enabling personalized messages, timely responses, and efficient workflows. Boosting productivity, engagement, and customer satisfaction.

08

Google WorkSpace

Google Workspace is a comprehensive suite of productivity tools that includes Gmail, Drive, Docs, Sheets, and more, enabling seamless collaboration and productivity for businesses and individuals.

09

Security/SSL

SSL (Secure Sockets Layer) ensures encrypted and secure communication between a user's browser and a website, safeguarding sensitive data from potential threats like hackers and eavesdroppers.

CONNECTIVITY

01

Fiber1

A basic website is a simple online platform, typically consisting of a few pages, such as Home, About, and Contact, delivering essential information and functionalities for visitors and users.

02

Fiber1 Lite

An advanced website offers cutting-edge features, seamless user experience, responsive design, efficient navigation, interactive elements, personalized content, high security, and advanced analytics to enhance online presence and engagement.

03

Multiprotocol Label Switching (MPLS)

MPLS stands for Multiprotocol Label Switching. It is a network protocol used to direct data packets efficiently across complex networks, providing faster and more reliable data transmission. eg. Users are Hospitals, Bank, Schools etc.

04

Direct Internet Access

Direct internet access is a standard, non-dedicated connection provided by an ISP, allowing users to access the internet for browsing and online activities.

05

Leased Line

Dedicated, private connection with fixed bandwidth, leased lines ensure reliable data exchange between locations, providing secure and high-speed internet access for businesses.

06

Dedicated Internet

Dedicated internet refers to a connection that provides exclusive, non-shared bandwidth, offering consistent and reliable internet access with guaranteed performance for a specific user or organization.

ICT SOLUTIONS

01

Cloud

Cloud services are internet-based resources and applications, like storage, computing power, and software, accessed remotely, offering scalability, flexibility, and cost-effectiveness for users.

02

Managed Router

A managed router is a network device maintained and configured by a service provider to ensure reliable and secure data transmission.

03

Access Point

An access point is a wireless networking device that allows Wi-Fi-enabled devices to connect to a wired network and access the internet

04

WI-FI Mesh

WiFi mesh is a network setup using multiple interconnected devices (nodes) to expand coverage, enhance signal strength, and create seamless internet connectivity

05

PABX

PABX (Private Automatic Branch Exchange) is a telephony system that manages internal phone calls and connects them to external lines

06

Security Firewall

A security firewall is a protective barrier that monitors and controls incoming and outgoing network traffic, preventing unauthorized access and potential cyber threats
